Director, Global Certifications

Webex App

Questions?

Use Webex App to chat with the speaker after the session

How

- 1 Find this session in the Cisco Events App
- 2 Click “Join the Discussion”
- 3 Install the Webex App or go directly to the Webex space
- 4 Enter messages/questions in the Webex space

Webex spaces will be moderated by the speaker until February 27, 2026.

Agenda

- 01 AI is Changing Everything**
- 02 AI Overview**
 - Introduction to AI
 - Impact of AI on ICT Job Roles
 - Perception of Certification
- 03 AI Journey**
 - Machine Learning vs. Deep Learning
 - Predictive AI vs. Gen AI vs Agentic AI
- 04 AI Deep Dive**
 - Compute
 - Storage
 - Network
 - Infra Monitoring and Observability
 - AI for Security, and Security for AI
- 05 Certification Roadmap**
- 06 AI-Related Training**

AI is changing everything...

Technology is defining every aspect of our lives

- Infrastructure
- Cybersecurity
- AI & Data

AI is changing every aspect of our lives

\$15.7T

Potential contribution to global economy by 2030

\$300B

Global spending on AI by 2026

75%

Of large enterprises will rely on AI-infused processes by 2026

Healthcare and Life Sciences

- Diagnosis
- Drug discovery
- Personalized medicine

Financial Services

- Fraud detection
- Risk assessment
- Trading

Retail

- Personalization
- Inventory optimization
- Virtual agents

Manufacturing

- Predictive maintenance
- Quality control
- Demand forecasting

Agriculture

- Yield optimization
- Automated irrigation
- Pest prediction & prevention

Transportation

- Route optimization
- Autonomous vehicles
- Predictive maintenance

Energy

- Distribution optimization
- Fault prediction
- Demand forecasting

Public Sector

- Smart cities
- Security
- Services improvement

Sources: PWC, IDC

AI Overview

Human and Artificial Intelligence (AI)

- Human: Learning, Reasoning, Perceiving, Understanding of language, Feeling

- Artificial Intelligence (AI): the science and engineering of making intelligent machines, especially intelligent computer programs. It is related to the similar task of using computers to understand human intelligence, but AI does not have to confine itself to methods that are biologically observable. (John McCarthy, 1956 (!))

Human and Artificial Intelligence (AI)

- Artificial Intelligence is not new.
- Until a few years ago, it was implemented using many static rules (if-then-else).
- Efficiency was low:
 - Code had to be written by humans.
 - Code could only be improved after a human noticed a flaw.
 - This approach worked fine until we found a way to let machines/computers learn from data on their own.

90% of the world's data was generated in the last two years

Cisco in AI era

- Infrastructure to power AI

- Security for AI, AI for security

- Data to drive insights and context

- Software to unlock productivity

- Services to accelerate the value of AI

- **Certifications to empower AI innovation and infrastructure**

Focus of today's session

Cisco AI Strategy

AI in the network / AI on the network

Cisco Certifications

The Impact of AI on Job Roles

AI Won't Replace Humans – But Humans With AI Will Replace Humans Without AI

Harvard Business Review, 2023

The AI Workforce Consortium

Download the Report

“Preparing for the Future: AI’s Impact on Information and Communication Technology Jobs”

Leading technology and workforce development companies share how AI is reshaping the most in-demand ICT roles.

AI Skills are Now Pervasive for Tech Jobs: 78% of the job roles analyzed include AI skills, highlighting a shift in role requirements across the G7.

AI Roles Dominate Technology Job Market Growth: 7 of the 10 fastest-growing ICT roles are AI-related, including AI/ML Engineer, AI Risk & Governance Specialist and NLP Engineer.

AI Ethics and Governance Skills Remain Critical: Demand for skills in AI Governance is +150% and AI Ethics +125%, reflecting the need for expertise at the intersection of technology, law and ethics.

Critical Technical Skills Deficit and Rising Importance of Human Skills: The skills deficit has reached critical levels in areas such as generative AI, large language models (LLMs), prompt engineering, AI ethics and AI security, while human skills like communication, collaboration and leadership are increasingly prioritized for responsible technology adoption.

Surge in Specialized AI Skills: The AI landscape is quickly shifting from chatbots to agents, driving demand for specialized skills, including AI security +298%, foundation model adaptation +267%, responsible AI +256% and multi-agent systems +245%.

AI is transforming the way we work, whether we like or not.

To stay ahead, we must adapt and evolve our skillsets.

Essential foundational skills...

... even for Network Engineers

AI Literacy

- Critically select and use AI tools for the task.
- Responsible use of AI tools.
- Understand ethical aspect of AI.

Data Fundamentals

- Data science principles and techniques.
- Data classification.
- Basic analytics.

Prompt Engineering

- How to interact with AI systems with prompt.
- Prompting techniques.
- Potential and limitation of the prompting engineering.

Job Roles are shifting for Network Engineers

Do Less of...

- Manual CLI configurations
- Basic Troubleshooting
- Reactive Troubleshooting
- Routine/management tasks
- **Basic Programming (!)**

Do More of...

- Develop AI literacy and prompt engineering skills to effectively interact with AI assistants.
- Understanding of AI technologies, and how to manage and leverage AI solutions.
- Data analytics skills.
- Focus on complex problem-solving, strategic planning, and innovation.

So are requirements for IT Hiring Managers

Look Less of...

- Candidates with expertise in manual tasks that can be now automated.
- Network-only interest/intelligence.
- Candidates with only traditional network management skills.

Look More of...

- Candidates with basic understanding of AI and machine learning concepts
- Individuals with AI literacy and prompt engineering skills.
- Candidate with strong problem-solving and analytical skills to interpret AI-generated insights.
- Candidates with the ability to manage and properly leverage AI solutions.

Perception of Certification

Top Skills

Cybersecurity and AI certifications are most relevant

Cybersecurity, AI/ML, and Software/App Development are the most sought-after areas for technical certifications, with Gen Z viewing them as highly relevant in today's job market.

CURRENT CERTIFICATION AREAS VS DEMAND
(GREEN represents certifications held vs. BLUE representing technology relevance)

Top Skills

Cybersecurity and AI are most relevant today

The top three technologies most relevant for technical certifications in today's job market are cybersecurity, AI/ML, and software development. Early in Career individuals are even more likely than Students and Job Seekers to flag these technologies as relevant.

AI Journey

Machine Learning (ML)

- ML allows computers to auto generate the rules that will allow them to solve problems.
- Rules can be generated after machines are properly trained.
- Training algorithms work by ingesting a huge amount of data related to the problem, along with the correct answers/description.
- After this lengthy process, the machine acquires knowledge about the topic.
- This is called a “trained model”, which is then used during the “inference” process.

Using ML Model for Forecasting

Predictive AI:

- Uses ML models trained on historical data to make predictions about the future (e.g. fraud detection, predicting customer behaviors)

Predictive AI

- Uses historical data to make statistical predictions on future outcomes
- Range of techniques from predictive analytics to ML and DL algorithms
- Fraud detection, risk assessment, anomaly detection, forecasting, recommendation systems, customer behavior prediction
- Delivering value today...and indispensable for organizations
- ~100M parameter range

Going Beyond Prediction to Creation

Generative AI

- Instead of just predicting outcomes, GenAI creates new data similar to what it has learned (using patterns seen before).

Generative AI

- Uses patterns seen before to predict and generate multimodal content (ChatGPT, DALL-E, Llama)
- Transformative, with unparalleled potential
- Popular model categories: Transformer models (GPT, BERT) and Stable Diffusion
- Large Language Models (LLMs) are significantly larger and resource-intensive than other ML models
- ~1B+ parameter range

Combining Human Ingenuity with AI Speed

Agentic AI

- Instead of passively responding to commands, AI agents jump into action to complete tasks end-to-end. Powered by LLMs, agentic AI systems understand, act and learn as trusted collaborators. Agentic AI combines generative AI's creativity with autonomous decision-making, planning and adaptive execution.

Agentic AI

- AI Agents can learn, plan and act autonomously
- Can collaborate with other agents or humans to complete complex, multi-step tasks.
- Processes text, audio, images and sensor data

The AI Journey

Artificial Intelligence (inclusive of Narrow, General, Super)

computers perform tasks that mimic human intelligence or do anything a human can do

Certification Relevance

Where you'll see this?

CCNA v1.1
Exam #200-301

6.4: Explain AI (generative vs predictive) and machine learning in network operations

Designing Cisco DC Infrastructure for Traditional and AI Workloads v1.2
Exam #300-610

1.1: Describe AI/ML concepts (application and uses, deep learning and machine learning concepts (inference vs trainings), etc.

CCDE: AI Infrastructure

1.0: AI/Machine Learning (ML, Deep Learning, LLM, GenAI, service placement, data sovereignty, regulations and governance, sustainability, etc.

AI Deep Dive

What does a system for AI entail?

What does an infra for AI entail?

- Inter-GPU Backend Network. High throughput (100G, 400G, 800G), lossless fabric for training.
- Training requires dense GPU nodes, clusters.
- Training and Inference can differ in compute density and utilization
- Infra can require extensive power and cooling
- Monitoring and Observability on top.

What does an infra for AI entail?

With Agentic AI, AI workloads no longer run only in one centralized cluster (as in training).

Workflows are **distributed and continuous** – AI agents interact dynamically across cloud, enterprise data centers, and edge, exchanging real-time data to make decisions.

Compute

GPUs are the Core of AI Infrastructure

Compute

Processing

AI workloads require specialized compute servers optimized for parallel processing and high memory bandwidth. Servers use (multiple) GPUs interconnected for efficient data sharing during the training.

Compute Needs

Training and inference have different compute needs

Cisco Servers

Hosting GPUs:

- Rack Servers – e.g. Cisco C240 M7 with up to 2 GPUs in PCIe slots
- Blade Servers – e.g. Cisco X-Series Chassis with GPUs
- Dedicated AI/ML Servers – e.g. Cisco C885A M8 with 8 GPUs

Certification Relevance

Where you'll see this?

New! Available from May 2025

Designing Cisco DC Infrastructure for Traditional and AI Workloads v1.2 Exam #300-610

1.1c: Hardware components (GPUs and DPUs/SmartNICs).

2.4: Evaluate UCS-X design options based on deployment and performance requirements.

2.5: Describe compute requirements for AI/ML applications.

CCDE: AI Infrastructure

4.1: Compute resources

4.2: AI-enabling hardware: GPU, SmartNIC, DPU

Storage

Storage – Tightly Related to Compute Infrastructure

AI systems need fast and scalable storage to handle large datasets efficiently.

Training workloads benefit from high-throughput access, while long-term storage must support reliability and growth.

Distributed storage systems are often used to provide access across multiple compute nodes

Certification Relevance

Where you'll see this?

Designing Cisco DC Infrastructure for Traditional and AI Workloads v1.2 Exam #300-610

3.4: Evaluate storage
deployment option for
traditional and high-
performance networks.

New! Available from May 2025

CCIE Data Center v3.1

5.1: FC and FCoE (including
zoning, NPV/NPIV, load
balancing, etc.)

CCDE: AI Infrastructure

4.4: Storage (including data
storage strategy, FC, FCoE,
NVME, NVME-oF, software-
defined storage and IP-
based storage protocols)

Network

AI Needs AI Network Infrastructure

Network

- Front-end: Network connecting hosts to the world
- Used to manage hosts
- Shared or dedicated storage network for data ingestion (can be converged with Front-end)

GPU Nodes

- Back-end: **Only contains GPU to GPU** and Collective communication
- Lossless Network for Remote Direct Memory Access (RDMA) traffic
- Non-blocking / High Speed

Network Requirements

Training Use Cases

Frontend Network Requirements

Low Latency | High Throughput | Scalability | Reliability

Backend Network Requirements

Lossless* | High Throughput | Low Jitter | Low Latency

Inferencing Use Cases

Network Requirements

Low Latency | High Throughput | Scalability | Reliability

While for Inferencing and Frontend networks you can use your existing DC network, **Backend** networks are typically **dedicated networks** built just for this purpose

* - Using ECN and PFC

Cisco Data Center Networking

Cisco Nexus Dashboard

Private cloud-managed, flexible solution

- General purpose data center solution
- Greenfield and brownfield deployments
- Any size spine-leaf data center (NXOS/ACI)
- Nexus Dashboard for simplified operations
- CloudScale and Silicon One Nexus 9000 switches

Cisco Nexus Hyperfabric

Cisco cloud-managed, fully integrated

- Easily design, order, deploy, monitor and upgrade fabrics
- Purpose built vertical stack
- Greenfield deployments only
- Cisco 6000 Series switches (Silicon One)

Not part of the certification yet
(as not yet widely adopted)

Certification Relevance

Where you'll see this?

CCIE Data Center v3.1

5.2: RoCEv2 transport for high performance networks, such as for AI/ML workloads (including PFC, ECN)

7.2: Nexus Dashboard (including NDFC – Fabric Controller)

CCDE: AI Infrastructure

2.0: Network (including: lossless fabrics, QoS in lossless fabrics, Connectivity and transport, Infrastructure, Application-level protocols such as RDMA and RoCE/RoCEv2, Connectivity models, etc.

Certification Relevance – Continuation

Where you'll see this?

New! Available from May 2025

Implementing and Operating Cisco DC Core Technologies

v1.2

Exam #350-601

4.3 Describe high-performance network enabling technologies for AI in data center infrastructure

Designing Cisco DC Infrastructure for Traditional and AI Workloads **v1.2**

Exam #300-610

1.2: Evaluate technologies for high-performance networks and AI workloads (including RoCE v2, Ethernet, InfiniBand, RDMA).

1.5: Evaluate QoS for lossless Ethernet.

1.8: Evaluate network segmentation methods using VXLAN and Cisco ACI.

Infra Monitoring & Observability

Monitoring and Observability

Infrastructure

Provides infrastructure management and operational insights, with a focus on hardware lifecycle management. Does issue detection.

Offers real-time network observability and AI-driven analytics for anomaly detection in AI/ML data flows. Ensures secure, policy-compliant traffic across on-prem and multi-cloud infrastructures.

AI on the network

Application

Centralizes logs and uses machine learning to detect anomalies in AI/ML infrastructure and applications. Provides real-time monitoring, alerts, and custom dashboards for performance and security insights.

AI in the network

Monitors AI/ML application performance and end-user experience, tracking resource utilization and response times. Uses AI-powered anomaly detection to predict and resolve potential issues early.

Certification Relevance

Where you'll see this?

CCIE Data Center v3.1

7.2.a: Nexus Dashboard (including Insights).

CCDE: AI Infrastructure

4.3: AI-assisted operations (including data scrubbing, log correlation and telemetry analysis).

Certification Relevance – Continuation

New! Available from May 2025

Where you'll see this?

Implementing and Operating Cisco DC Core Technologies

v1.2

Exam #350-601

3.4: Implement infrastructure monitoring using traditional and AI-powered tools such as SPAN, Cisco Nexus Dashboard.

Implementing Cisco Application Centric Infrastructure **v1.2**

Exam #300-620

5.2: Utilize traditional and AI-assisted monitoring tools (including syslog, SNMP and Nexus Dashboard Insights)

AI for Security and Security for AI

AI for Security

The AI for Security is composed of these components injected across Cisco Security Portfolio.

- AI Assist: For Experience to simplify management and improve outcome
- AI Augment: For Detection to correlate 550B events at machine speed.
- AI Automate: For Action to automate complex playbooks.

AI-Powered Assistance in Cisco Products-Solutions

- Firewall
- XDR
- DUO
- SSE

AI-Powered Assistance in Cisco Products

- Automated Summaries
- Playbook recommendation
- Playbook automation

AI-Powered Detection in Cisco Products:

- LLMs in Cisco SETHD use to mitigate BEC attacks.
- LLMs in Cisco Secure Access to detect and block intellectual property in documents as DLP.
- EVE in Cisco FMC and Firewalls to provides visibility into encrypted packets.
- Ensemble models in Cisco Secure Analytics to provide network visibility and threat detection.
- SnortML framework in Cisco Secure Firewall to detect zero-day attacks.

Security for AI

The Security for AI is provided by Cisco AI defense composed of these components:

AI Assets Identification

- Workload
- Application
- Models
- Data
- User

AI Access

- Inspects web traffic to discover shadow AI apps.
- Provides risk assessment of shadow AI apps.
- Provides access and policy controls for the AI apps.

AI Models Validation

- Scans models for threats.
- Tests models for vulnerabilities.

AI Runtime Inspection

- Inspects prompt input for malicious and sensitive payload.
- Scans model output for sensitive data and hallucinations.

Certification Relevance

Where you'll see this?

Cybersecurity Operations Fundamentals v1.2

Exam #200-201

2.7: Describe social engineering attacks (manual and generative AI)

3.1: Describe the functionality of endpoints technologies in regard to security monitoring utilizing rules, signatures, and predictive AI

Performing Cybersecurity Using Cisco Security Technologies v1.2

Exam #350-201

2.1: Recommend AI-powered data analytics techniques to meet specific needs or answer specific questions.

2.12: Apply AI-driven threat intelligence using tools.

3.4: Interpret the sequence of events during an attack based on predictive AI analysis of traffic patterns.

New! Available from May 2025

Designing Cisco Security Infrastructure v1.0

Exam #300-745

2.3: Describe the design policies to address the impacts of emerging technologies such as generative AI, machine learning, and quantum computing.

4.0: Artificial Intelligence, Automation, and DevSecOps (including describing the functions, uses, and role of AI in securing the network infrastructure).

Certification Relevance – Continuation

Where you'll see this?

Conducting Forensic Analysis and Incident Response Using Cisco Technologies for Cybersecurity v1.2

Exam #300-215

3.6: Recommend response to 0-day exploitations such as risk assessment and exploitation prediction, SIEM data collection and processing in AI-based predictive vulnerability management.

CCDE: AI Infrastructure

3.0: Security

3.1: AI/ML infrastructure hosting implications.

3.2: Infrastructure protection (including air-gapped, public, and private).

3.3: Protection against malicious uses, such as web application firewalls, etc.

Certification Roadmap

AI in Cisco Certifications

Certification	Summary	Exam	AI Topic
CCDE	Expert-level certification exam elective for designing AI-ready networks	CCDE AI Infrastructure Elective	- Scalable AI workload design - Secure AI data pipelines - AI for Network Automation
	Specialization badges reflecting the elective CCDE certified expert selected during their examination such as the new AI Infrastructure expertise	CCDE Specialist Badges	- AI Infrastructure - Large scale networks - Cloud services - Workforce Mobility
CCIE DC	CCIE Expert level Certification updated to include AI workloads	CCIE Data Center	Optimizing transport for high performance networks such as AI/ML workloads
CCNP DC	Renamed CCNP Data Center Design exam to include AI workloads in title	DCID - Designing Cisco Data Center Infrastructure for Traditional and AI workloads	- AI cluster design - Power management for GPU farms - Multi-vendor AI integration
	CCNP Data Center Certification exams have been updated to recognize network enabling and monitoring technologies for AI in data center infrastructure	DCCOR - Implementing and Operating Cisco Data Center Core Technologies	- Infrastructure monitoring using AI-powered tools - Nexus Dashboard - High-performance network enabling technologies for AI in DC Infra
		DCACI - Implementing Cisco Application Centric Infrastructure	AI assisted monitoring tools

AI in Cisco Certifications

Certification	Summary	Exam	AI Topic
CCNP Enterprise	CCNP Enterprise certification exams include AI-related exam topics	ENCOR - Implementing and Operating Cisco Enterprise Core Technologies	• Cisco Catalyst Center using traditional and AI-powered workflows
		ENSDWI - Implementing Cisco SD-WAN Solutions	• Cisco Catalyst SD-WAN AI-driven Predictive Path Recommendation
		ENWLSD - Designing Cisco Enterprise Wireless Networks	• Cisco Catalyst Center AI-Enhanced RRM
CCNP Security	Newly launched CCNP Security Specialist Exam	SDSI - Designing Cisco Security Infrastructure	• Role of AI in securing network infrastructure
CCNP Collaboration	Major revision of the CCNP Collaboration with two new exams focused on Cloud and Contact Center to include AI-related exam topics	CLHCT – Implementing Hybrid and Cloud Technologies	• AI features in Cloud Collaboration Solutions
		CLCCE – Implementing Cloud Customer Experience	• Webex AI Agent • AI Assistant
Cybersecurity	CyberOps renamed to Cisco Cybersecurity certifications and have been updated to include AI-related exam topics	CBROPS - Cybersecurity Associate	• Predictive AI
		CBRCOR - Cybersecurity Professional	• AI-powered and AI-driven analysis
CCNA	Update with AI/ML focus	CCNA	• Generative AI • Predictive AI • ML in network operations

AI-Related Training

Cisco U. Learning Paths

Understanding AI and LLMs as a Network Engineer (AI4NE)

- Beginner level. 55 minutes.
- Cisco U. FREE License

AI Business Practitioner (AIBIZ)

- Beginner level. ~9 hours.
- Cisco U. FREE License

AI Solutions on Cisco Infrastructure Essentials (DCAIE)

- Beginner level. ~34 hours.
- Cisco U. Essentials License

Automate AI Solutions on Cisco Infrastructure (DCAIAA)

- Advanced level. ~7 hours.
- Cisco U. All-Access License

AI's Impact on Network Engineering

AI and Network Engineers

https://www.youtube.com/watch?v=F6T0_rPKoZI

Critical Skills Network Engineers Need in the AI Era

<https://www.youtube.com/watch?v=pi6VVCd-ybU>

Summary

AI is rapidly transforming industries and job roles, creating significant economic potential, but requiring new skillsets.

ICT professionals, including network engineers, must develop AI literacy, data analytics and prompt engineering skills to remain relevant.

AI workloads demand specialized, high-performance infrastructure including compute (GPUs), storage and networking (lossless fabrics).

Cisco is strategically incorporating AI into products, infrastructure, and services, focusing on both: “AI in the network” and “AI on the network”.

Cisco is updating its certifications and training programs to address the growing importance of AI, ensuring professionals have the necessary expertise.

Complete your session surveys

Complete your surveys in the Cisco Events App.

Complete a minimum of 4 session surveys and the overall event survey to receive a unique Cisco Live t-shirt.
(from 11:30 on Thursday, while supplies last)

Continue your education
